

Configuración de la distribución

Una vez creada la aplicación, se debe dar clic derecho sobre ella y seleccionar **Properties**. Una vez abra la ventana de propiedades, se debe seleccionar la pestaña **Distribution Settings**.

The screenshot shows the 'Business Analytics Properties' dialog box with the 'Distribution Settings' tab selected. The dialog has a title bar with a close button (X) and a tab bar with the following tabs: General Information, Software Center, References, Distribution Settings (active), Deployment Types, Content Locations, Supersedence, and Security. The main content area contains the following text: 'Specify the distribution settings for this package.' followed by 'Use distribution priority to determine the order in which packages are sent to other sites and the distribution points in the same site. Packages that you configure to have a high priority are sent before packages that have a medium priority or a low priority. Packages that have the same priority are sent in the order in which they are created.' Below this is a 'Distribution priority:' label and a dropdown menu set to 'High'. Further down is the text: 'When the content is not available, specify whether you want to distribute the content to distribution points that are configured for on-demand distribution and in the current boundary group for the client.' followed by an unchecked checkbox labeled 'Enable for on-demand distribution'. At the bottom is a section titled 'Prestaged distribution point settings' containing three radio button options: 'Automatically download content when packages are assigned to distribution points' (selected), 'Download only content changes to the distribution point', and 'Manually copy the content in this package to the distribution point'. The bottom of the dialog features a help icon (question mark in a circle), and three buttons: 'OK' (highlighted with a blue border), 'Cancel', and 'Apply'.

Se debe seleccionar en **Distribution priority** la opción **High** y en las opciones de **Prestaged distribution point settings** se debe elegir la opción **Automatically download content when packages are assigned to distribution points**.
