

Información de la actualización

En la ventana donde se le pide proporcionar más información, deberá colocar un nombre que distinga esta aplicación de la anterior, por ejemplo **Business Analytics Upgrade**.

The screenshot shows the 'Create Application Wizard' window with the 'General Information' tab selected. The window title is 'Create Application Wizard'. The left sidebar contains the following options: General (selected), Import Information, General Information, Summary, Progress, and Completion. The main area is titled 'Specify information about this application'. It contains several input fields: 'Name' (filled with 'Business Analytics Upgrade'), 'Administrator comments' (empty), 'Publisher' (empty), 'Software version' (empty), 'Optional reference' (empty), and 'Administrative categories' (empty with a 'Select...' button). Below these is a section titled 'Specify the installation program for this application and the required installation rights.' containing an 'Installation program' field (filled with 'msiexec /i "endpointInstaller-v3.2.0.msi" /quiet /qn' and a 'Browse...' button), a checkbox for 'Run installation program as 32-bit process on 64-bit clients.' (unchecked), and an 'Install behavior' dropdown (set to 'Install for system'). At the bottom are buttons for '< Previous', 'Next >' (highlighted), 'Summary', and 'Cancel'.

Specify information about this application

Name: Business Analytics Upgrade

Administrator comments:

Publisher:

Software version:

Optional reference:

Administrative categories: Select...

Specify the installation program for this application and the required installation rights.

Installation program: msiexec /i "endpointInstaller-v3.2.0.msi" /quiet /qn Browse...

☐ Run installation program as 32-bit process on 64-bit clients.

Install behavior: Install for system

< Previous Next > Summary Cancel

En el campo de texto de **Installation program** deberá especificar el comando para instalar la nueva versión:

```
msiexec /i "endpointInstallation-v3.2.0.msi" /quiet /qn
```

Deberá luego seleccionar en **Install behavior** la opción **Install for system**, porque igual que la aplicación original, el nuevo agente también requiere que se ejecute la instalación con un rol privilegiado.
