

Propiedades de la actualización

Una vez finalizada la creación de la aplicación para la actualización, se procede a dar clic derecho sobre ella y luego en la pestaña **Distribution Settings** deberá seleccionar **High** en **Distribution priority**.

The screenshot shows the 'Business Analytics Upgrade Properties' dialog box with the 'Distribution Settings' tab selected. The dialog has a title bar with a close button (X) and a tab bar with the following tabs: General Information, Software Center, References, Distribution Settings (active), Deployment Types, Content Locations, Supersedence, and Security.

Inside the 'Distribution Settings' tab, there is a section titled 'Specify the distribution settings for this package.' followed by an explanatory text: 'Use distribution priority to determine the order in which packages are sent to other sites and the distribution points in the same site. Packages that you configure to have a high priority are sent before packages that have a medium priority or a low priority. Packages that have the same priority are sent in the order in which they are created.'

Below this text, there is a 'Distribution priority:' label and a dropdown menu currently set to 'High'.

Further down, there is a text block: 'When the content is not available, specify whether you want to distribute the content to distribution points that are configured for on-demand distribution and in the current boundary group for the client.'

Below this text is a checkbox labeled 'Enable for on-demand distribution', which is currently unchecked.

Below the checkbox is a section titled 'Prestaged distribution point settings' containing three radio button options:

- ☒ Automatically download content when packages are assigned to distribution points
- ☐ Download only content changes to the distribution point
- ☐ Manually copy the content in this package to the distribution point

At the bottom of the dialog, there are three buttons: 'OK' (highlighted with a blue border), 'Cancel', and 'Apply'.

Para terminar, deberá seleccionar la opción **Automatically download content when packages are assigned to distribution points**.

The Fraud Explorer es un software que junto con **FraudGPT** detecta el fraude y la corrupción en las organizaciones. Este software está siendo desarrollado por **NOFRAUD.la**. Este contenido es privado y únicamente está disponible para clientes de NOFRAUD. Está prohibida su publicación en fuentes abiertas o disponibles al público.

Revision #1
