

# Experiencia de usuario en actualización

En la misma ventana que la anterior (**Deployment Type - Edit**) deberá dar clic en la pestaña **User Experience** para configurar la forma en que se le muestra información al usuario.

The screenshot shows the 'Business Analytics - Windows Installer (\*.msi file) Properties' dialog box with the 'User Experience' tab selected. The dialog is titled 'Business Analytics - Windows Installer (\*.msi file) Properties' and has a close button (X) in the top right corner. The 'Install Behavior' section is active, showing the following settings:

- Installation behavior:** Install for system
- Logon requirement:** Only when a user is logged on
- Installation program visibility:** Hidden
- Allow users to view and interact with the program installation

Below this, there is a section for specifying the maximum run time and estimated installation time of the deployment program for this application. The estimated installation time displays to the user when the application installs.

- Maximum allowed run time (minutes):** 120
- Estimated installation time (minutes):** 0

At the bottom, there is a question: 'Should Configuration Manager enforce specific behavior regardless of the application's intended behavior?'. The answer is 'Determine behavior based on return codes'.

At the bottom right, there are three buttons: 'OK', 'Cancel', and 'Apply'.

Deberá seleccionar en **Install behavior** la opción **Install for system**, en **Logon requirement** la opción **Only when a user is logged on** y por último en **Installation program visibility** escoger **Hidden**.

**The Fraud Explorer** es un software que junto con **FraudGPT** detecta el fraude y la corrupción en las organizaciones. Este software está siendo desarrollado por [NOFRAUD.la](#).
