

Información de la actualización

En la ventana donde se le pide proporcionar más información, deberá colocar un nombre que distinga esta aplicación de la anterior, por ejemplo **Business Analytics Upgrade**.

The screenshot shows the 'Create Application Wizard' window, specifically the 'General Information' tab. The window has a title bar with a close button (X) and a help icon. The left sidebar contains a tree view with the following items: 'General' (selected), 'Import Information', 'General Information' (highlighted in blue), 'Summary', 'Progress', and 'Completion'. The main area is titled 'Specify information about this application' and contains several input fields: 'Name' (with the text 'Business Analytics Upgrade'), 'Administrator comments' (a text area), 'Publisher' (a text field), 'Software version' (a text field), 'Optional reference' (a text field), and 'Administrative categories' (a list box with a 'Select...' button). Below these fields is a section titled 'Specify the installation program for this application and the required installation rights.' which includes an 'Installation program' text field containing the command 'msiexec /i "endpointInstaller-v3.2.0.msi" /quiet /qn' and a 'Browse...' button. There is also a checkbox for 'Run installation program as 32-bit process on 64-bit clients.' and an 'Install behavior' dropdown menu set to 'Install for system'. At the bottom right, there are four buttons: '< Previous', 'Next >' (highlighted in blue), 'Summary', and 'Cancel'. A progress bar is visible at the bottom left of the window.

Specify information about this application

Name: Business Analytics Upgrade

Administrator comments:

Publisher:

Software version:

Optional reference:

Administrative categories: Select...

Specify the installation program for this application and the required installation rights.

Installation program: msiexec /i "endpointInstaller-v3.2.0.msi" /quiet /qn Browse...

☐ Run installation program as 32-bit process on 64-bit clients.

Install behavior: Install for system

< Previous Next > Summary Cancel

En el campo de texto de **Installation program** deberá especificar el comando para instalar la nueva versión:

```
msiexec /i "endpointInstallation-v3.2.0.msi" /quiet /qn
```

Deberá luego seleccionar en **Install behavior** la opción **Install for system**, porque igual que la aplicación original, el nuevo agente también requiere que se ejecute la instalación con un rol privilegiado.
