

Requerimientos de actualización

Microsoft Intune exige seleccionar como requerimiento una versión de Windows mínima, para este caso se selecciona Windows 10 1607.

The screenshot shows the 'Add App' wizard in the Microsoft Intune admin center, specifically the 'Requirements' step. The wizard is for a 'Windows app (Win32)'. The 'Requirements' step is highlighted with a blue underline. The wizard has six steps: 1. App information, 2. Program, 3. Requirements, 4. Detection rules, 5. Dependencies, and 6. Supersedence. The 'Requirements' step is currently active. The wizard prompts the user to 'Specify the requirements that devices must meet before the app is installed:'. There are two radio button options: 'Yes. Specify the systems the app can be installed on.' (which is selected) and 'No. Allow this app to be installed on all systems.' Below the radio buttons, there are several input fields: 'Minimum operating system *' (set to 'Windows 10 1607'), 'Disk space required (MB)', 'Physical memory required (MB)', 'Minimum number of logical processors required', and 'Minimum CPU speed required (MHz)'. At the bottom, there is a section for 'Configure additional requirement rules' with a table that has two columns: 'Type' and 'Path/Script'. The table currently contains one row with the text 'No requirements are specified.' and a '+ Add' button below it. At the very bottom of the wizard, there are 'Previous' and 'Next' buttons.

El resto de opciones se deja en blanco y se da clic en el botón **Next**.
