

Requisitos de instalación

Microsoft Intune requiere que se le especifique cuál es la versión del sistema operativo compatible con nuestra aplicación. En este caso elegimos Windows 10 en su versión 1607, que es la versión mínima que soporta **Microsoft Intune**.

The screenshot shows the 'Add App' wizard in the Microsoft Intune Admin Center, specifically the 'Requirements' step. The wizard is titled 'Add App' and is for a 'Windows app (Win32)'. The progress bar shows that 'App information' and 'Program' are completed, while 'Requirements' is the current step. The instructions state: 'Specify the requirements that devices must meet before the app is installed:'. There are six steps in the wizard: 1. App information, 2. Program, 3. Requirements, 4. Detection rules, 5. Dependencies, and 6. Supersedeance. The 'Requirements' step includes the following options and fields:

- Check operating system architecture ***: Yes. Specify the systems the app can be installed on. No. Allow this app to be installed on all systems.
- Minimum operating system ***: A dropdown menu set to 'Windows 10 1607'.
- Disk space required (MB)**: An empty text input field.
- Physical memory required (MB)**: An empty text input field.
- Minimum number of logical processors required**: An empty text input field.
- Minimum CPU speed required (MHz)**: An empty text input field.

Below these fields, there is a section for 'Configure additional requirement rules' with a table with columns 'Type' and 'Path/Script'. The table is currently empty, with the text 'No requirements are specified.' below it. A '+ Add' button is located at the bottom left of this section. At the bottom of the wizard, there are 'Previous' and 'Next' buttons.

Se deja en blanco cualquier otra información, como espacio en disco, memoria o procesadores y se da clic en **Next**.
